

### SmartHome Gateway

IC722w/z

- Z-Wave Controller
- Wide angle lens Day&Night
- 2Mega-pixel 1920x1080
- Two-way audio
- SD card recording
- 2.4GHz WiFi

### Pan/Tilt SmartHome Gateway

IC731w/z

- Z-Wave Controller
- Pan/tilt
- Mega-pixel 1280x800
- Two-way audio
- Dual-lens Day&Night
- SD card recording
- 2.4GHz WiFi

### Mini FHD

IC721w

- Wide angle lens Day&Night
- 2Mega-pixel 1920x1080
- Two-way audio
- SD card recording
- 2.4GHz WiFi

*Smart Home is on*

### Outdoor FHD

IC727FHD

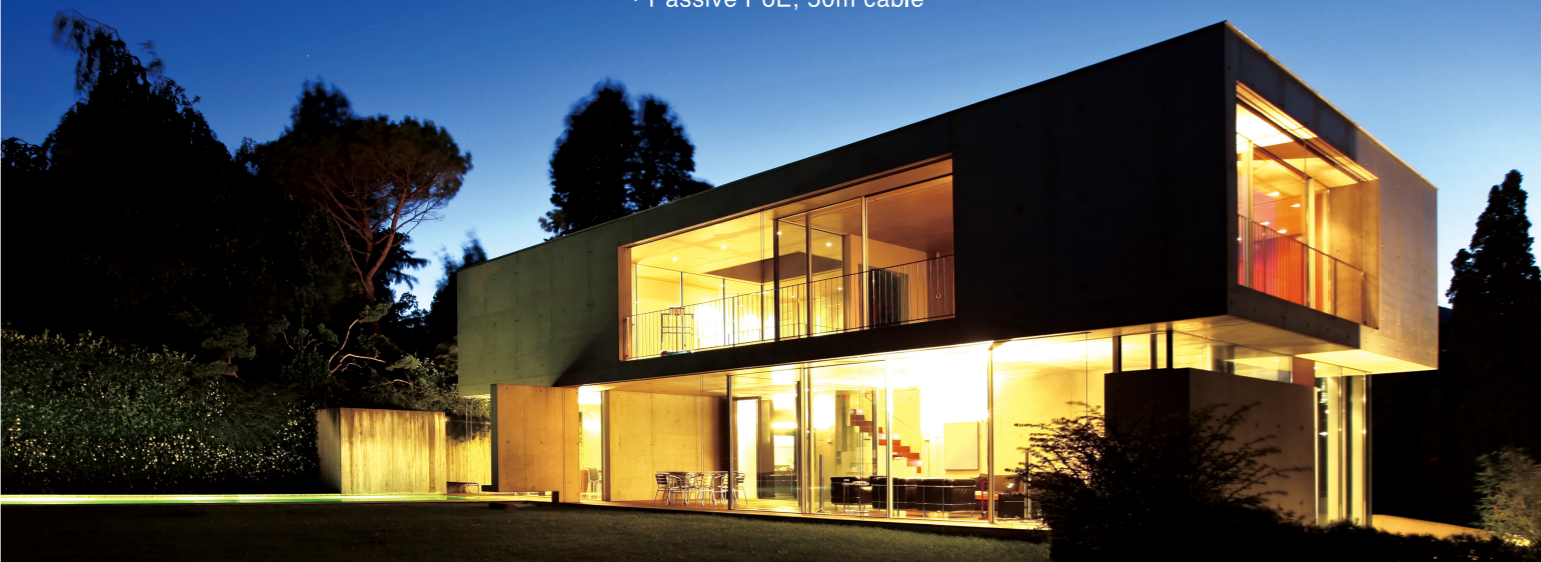

- IP66 water proof
- Wide angle lens Day&Night
- 2Mega-pixel 1920x1080
- SD card recording
- Passive PoE, 50m cable

### Pan/Tilt

IC737w

- Pan/tilt
- Two-way audio
- Dual-lens Day&Night
- SD card recording
- PIR+Thermometer
- 2.4GHz WiFi

# The future is NOW

Are you ready for smart home?

**We are!**

**StarVedia**

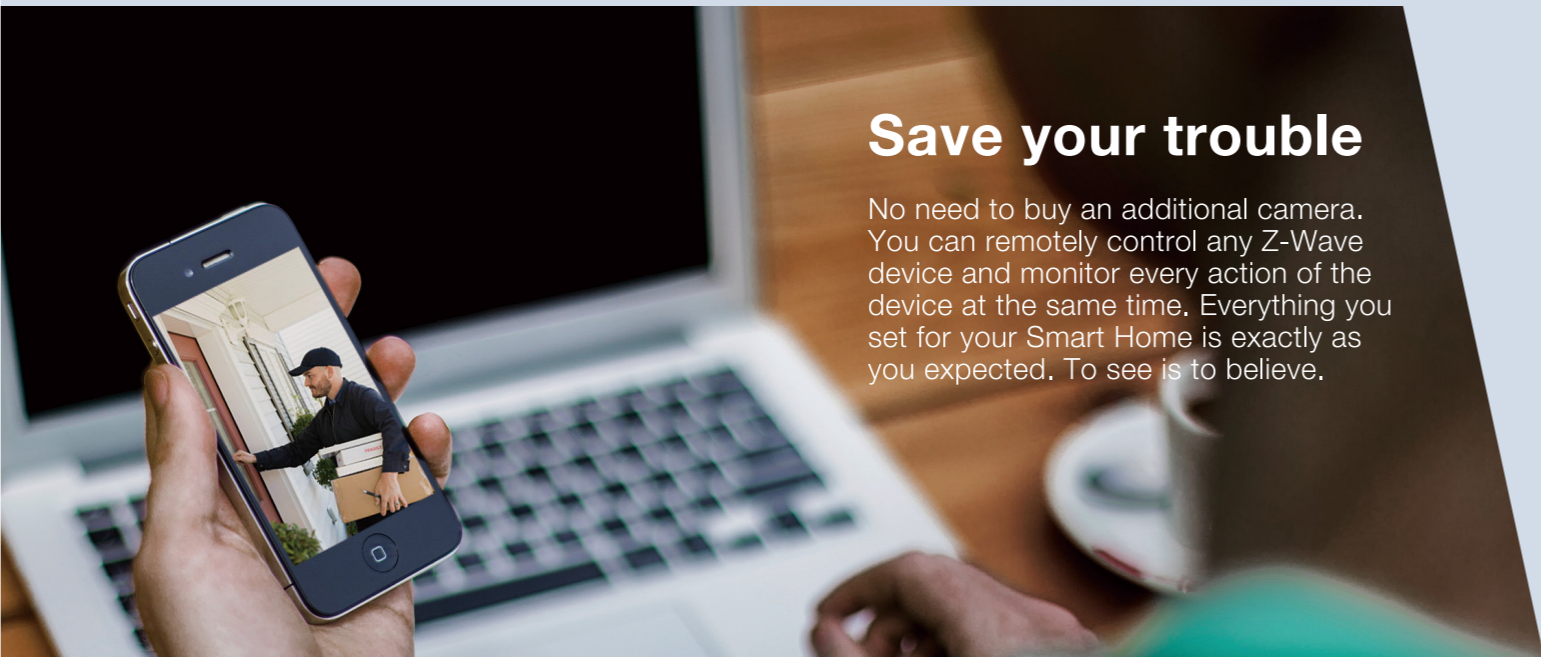

## Save your money

Everything you need for a Smart Home is in a unit since the system is controller-and-camera integrated. No extra expense.

## Save your trouble

No need to buy an additional camera. You can remotely control any Z-Wave device and monitor every action of the device at the same time. Everything you set for your Smart Home is exactly as you expected. To see is to believe.

## Save your time

It's so easy to install this Smart Home system. One setup process can cover both gateway and camera installations.

# Smart Home GATEWAY & CAMERA — 2 in 1

Z-Wave gateway is on

Amazon Alexa is on

Camera is on

Google Home is on

Geosense is on

IFTTT is on

IC722z

IC731z

# Enjoy The **REAL SMART HOME** World.

## **Security**

The system will make you feel safe when you are away from your house. The camera is monitoring and will start recording if something happens. It will also notice you when someone breaks into your house, when the smoke is detected, and when the bathroom or basement floods.

## **Peace of mind**

When the postman presses the doorbell, you will get notified and are able to remotely open the door for him or ask him to leave the package at the front door. When your kids stay at home, you could monitor and get notified if something happens in your house. You are confident as if you are at home.

## **Comfort**

The lights, air conditioner and TV in your house will be automatically turned on when you arrive home. The lawn will be sprinkled when the moisture sensor detects it's too dry. The curtains, lights, and music will be turned on when you wake up. The house will be switched to alarm mode when you leave the house.

## **Voice control**

When you are driving, you will be able to talk to your mobile to unlock the door for your kids if they forget to bring the key back home. You could turn on the TV and air conditioner by giving voice commands when you are carrying something. You can even switch the room to romantic mode at the right moment. The system works with **Amazon Alexa** and **Google Home**.

## **Compatibility – Zwave**

With the Z-Wave certification, the system is compatible with more than 3,000 pieces of Z-Wave devices in the market. This makes you confident that the system is up to the future.

## **Expansion**

The system is self-expandable when new devices or new features are added in the market. You will be able to upgrade the App and firmware to keep expanding your system and application.

## **Interoperability – IFTTT**

How about those devices or systems that are not Z-Wave compatible? It's easy now. The system supports IFTTT, so every device could now be connected together.

## SMART HOME TECHNOLOGY

## CAMERA TECHNOLOGY

### Z-Wave Plus Certified

Both IC731z and IC722z are Z-Wave certified products. These Smart Home gateway cameras are compatible with more than 3,000 Z-Wave devices in the market.

### Geosense

When you are away from your house, the system automatically detects this and alarms you house. When you are home, the system will automatically turn on the light, air conditioner and TV for you.

### Time Lapse Recording

With the Time-Lapse recording function, things that happened during days or even years in real time can be played back over just a few minutes.

### P2P Video Streaming

Peer to peer technology decreases the video stream latency. The video stream does not pass through the server, so the users do not need to worry that the video could be captured by the server or be hacked.

### Sensor Activated Patrol

This sensor activated patrol works with any smart home Z-Wave sensor, including PIR sensor, flood detector, temperature sensor, smoke detector, etc. When an event is detected, the camera will automatically patrol to the sensor position to catch and record the critical video.

### Multi Condition Scene

The system has a multi condition and multi action scene. The scene will work even when the internet is disconnected. And because the scene is controlled by the local controller, there is no delay. All these are something better than through IFTTT.

### Scene Triggered Recording

Whenever a scene is triggered, the SD card will start to do the video recording for 30 seconds. Accompany with the "sensor activated patrol", the system will catch every critical moment for you.

### 5 Seconds Pre-recording

The IP camera is watching your house day and night. When the alarm is triggered, the camera will start SD card recording, and this recording even starts 5 seconds in advance to the alarm event. Your mobile device will receive the alarm notification, and you could retrieve the recorded video immediately to check the whole situation.

### Voice Control

Our Smart Home system is compatible with voice control technologies, including Amazon Alexa/Echo and Google Home. After setting up the instructions, you can make things happen in just a second.

### IFTTT Integration

As an IFTTT partner, we let you connect our Smart Home system with hundreds of world's top brands and services, such as Facebook, Twitter, Skype, Spotify, etc. You can now create countless applications easily and quickly.

### Temperature Alert

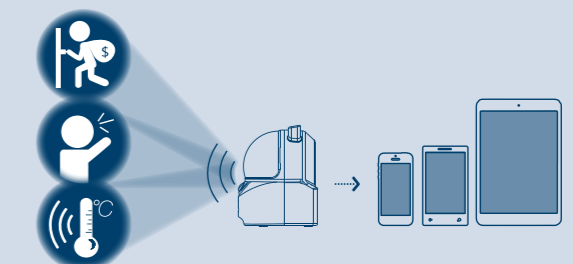

Temperature alarm is very useful in places like green house, drugstore, and baby room warehouse. It creates new home security market where temperature control is important for those like babies, elders, and patients.

### Alarm Notification

The mobile device will receive alarm notification immediately when the alarm is triggered, and the video is recorded in SD card for later evidence usage.

### Smart Cloud Storage

The camera could record the video to different cloud storage, including Dropbox, Amazon cloud, or any standard NAS device. You can also play the recorded videos remotely on your mobile devices.

### Remote Playback

All the recorded videos on SD card, dropbox and NAS could be played back on the mobile and table. And could be downloaded and converted to mpeg4 for share on facebook or any other social App.

### Smart APP-mCamViewZ+

Our Smart Home Solution on a Camera comes with a super user-friendly App named mCamViewZ+.

mCamViewZ+ with its intuitive design will give you the best usage and user experience of our smart cameras. You will be able to easily configure and use all the innovative features provided by our cameras.
